Dear Sirs, It has been a pleasure to use the XM radio as a traffic and weather reporting to me while driving thru various cities. It is a much safer method to getting the latest updates on traffic and weather. My old method was to constantly search for local radio stations which don't always broadcast the information that I need at the time. Often I have finally got a public radio station that gives me either weather or traffic and it would only indicate the conditions once every 30 minutes. That delay has gotten me into traffic jams that lasted more than 45 minute delays (which I could have avoided had the info been as timely as XM radion is).

Pleas do not pass NAB petition 04-160. I pay for that service and find no other alternative to the XM radio solution which I use all the time now.

Respectfully,
George V Sintz
